1. Questions for Developers/Product Managers

2. What are the limitations or negative scenario (if any) available for fine grained RBAC feature?
3. What is the maximum or threshold value for the number of roles that can be created in MAS? If there is a threshold value on number role creation, then what is the impact of it in MAS?
4. What are the configuration steps required for fine grained RBAC in MAS? Steps used in a GUI manager or CLI should be provided.
5. How does fine grained RBAC feature is implemented in MAS release strategy? Would all future releases of MAS have this feature enabled by default or this feature is available only for specific customers (Product customizations)?

2. Suggestions/Improvements about the contents

Since the system administrator needs to perform the configuration for fine grained RBAC in MAS, the need for configuration, configuration procedure, or the reference of such information should be documented in other guides of MAS as well, such as Security guide, Installation guide and so on.
